

# Computer Science

## Introduction

The Computer Science Program teaches basic knowledge of computer science include algorithms, methods of application development and database technology with knowledge and understanding of mathematical concepts. Curriculum designed based on international curricula ACM (Association for Computing Machinery) and input from business and industry. The graduate expected from this program can compete internationally and provide creative and innovative solutions in place of work.

## Vision

A world-class online learning study program by providing excellent educational relevant experiences and updatable to trend in computer science, fostering and empowering the society in building and serving the nation

## Mission

The mission of Computer Science Study Program is to contribute to the global community through the provision of world-class education by:

1. Educating students to effectively apply their educational experiences in computer science to solve real-world problems.
2. Preparing our graduates to develop exemplary soft skills & technical skills required as ICT professionals, leaders and entrepreneurs in the global market.
3. Promoting practical application or high impact research in computer science that contributes to the nation.
4. Fostering BINUSIAN as lifelong learners through self-enrichment in information technology.
5. Empowering BINUSIAN using current ICT technology to continuously improve society's quality of life

## Program Objective

The objectives of the program:

1. Graduates will become successful professionals in ICT fields by either obtaining an advanced technical or management position
2. Graduates will obtain employment in ICT global companies or become entrepreneurs
3. Graduates will continue their formal education or pursue professional international certifications

## Student Outcomes

After completing the study, graduates are:

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of computer science
3. Communicate effectively in a variety of professional contexts
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles
5. Function effectively as a member or leader of a team engaged in activities appropriate to computer science

6. Able to apply computer science theory and software development fundamentals to produce computing-based solutions
7. Solve information technology problems using an artificial intelligence-based technological approach
8. Solve information technology problems using a computer network-based technology approach
9. Solve problems through the multidisciplinary approach.

### Prospective Career of the Graduates

1. Network Administrator/Specialist
2. Data Scientist
3. Business Data Architect
4. Cyber Security Analyst
5. Application Developer
6. Software Engineer
7. Information Technology Technopreneur

### Curriculum

The curriculum has been developed in line with the National curriculum. Also, the local content has been developed in line with the Computer Science Curriculum standard of ACM (Association for Computing Machinery), local and foreign universities, and market trend. Therefore, the graduates are expected to be able to face the competition at both national and international level.

**Individual Development Project**

For students who take Certified Individual Development Project in semester 7, they should take these courses:

Course		SCU
COMP6944036	Industrial Project Planning in Information Technology	6
COMP6945036	Industrial Project Implementation in Information Technology	4
COMP6946036	Industrial Project Evaluation and Reporting in Information Technology	6
COMP6947036	Business Ethics in Information Technology Industry	4
Total SCU		20

**Enrichment Track Scheme**

Track scheme for semester 6 and 7. Student will take one of the tracks:

Enrichment Program Track
